Alcohol Related Brain Damage (ARBD): An Overview

Alcohol Related Brain Damage (ARBD) is a brain disorder that is caused by drinking too much alcohol over a long period of time.

This session will give professionals a basic introduction to the term ARBD, describe different conditions including Wernicke-Korsakoff syndrome and alcoholic dementia, and provide examples of best practices when working with individuals living with ARBD.

After attending this course participants will be able to:

- **Introduce and identify Alcohol Related Brain Damage and common conditions.**
- **Give examples of symptoms and challenges individuals living with ARBD experience.**
- **Identify common treatment and management of symptoms.**
- **Give examples of best practices when working with an individual who has been diagnosed with ARBD.**
- **List resources for more information, education, and support for family members, and other professionals within your organization.**
