

Previously Recorded Audio/ Video Seminar

Dementia Care with Medications

Medications can be helpful for some, but a hazard for others— especially for those living with a Dementia disease. This session will identify the most common Alzheimer's medications and other treatments associated with managing symptoms of dementia. Special attention will be made to explain side effects, and why reduction is necessary.

After attending this course participants will be able to:

- **Identify most common Alzheimer's medications and treatments associated with managing symptoms of dementia**
- **Give examples of common side effects professionals need to monitor, and explain why reduction may be necessary.**
- **Recognize medications that may not be suitable for elders with dementia.**
